SUBJECT: Paddys Run Road Site/U. S. DOE  
Exchange Agreement

The Paddys Run Road Site Companies have completed their Phase I RI field activities that included soil borings, on-site and off-site monitor well installation and well development and surface water-sediment sampling. On May 17th, the first round of ground water sampling from installed monitor wells, selected DOE wells and domestic/business wells was completed. The success of this sampling effort is due in large measure to the assistance provided by DOE's contractor, ASI.

A representative of the consulting company performing the PRRS RI/FS, ENSR, reviewed the available file information-data generated by the FMPC RI program in the offices of ASI. The enclosed list represents the initial request by the Companies for specific information under the exchange agreement entered into by DOE and the PRRS Companies in November 1989. Additional such requests may be made in the future as both RI/FS programs progress.

Additionally, we would appreciate being included on the mailing list of interested parties to receive both DOE and USEPA notices of public meetings work shops or hearings to be held related to the FMPC RI/FS and/or the availability of documents and reports.

I would be appreciative of the opportunity to discuss the content of the enclosed list with either representatives of DOE, Westinghouse Materials Company or ASI at their convenience. ASI will commence the sampling of selected piezometer wells installed by the PRRS on May 22nd. It is obvious that the exchange of information-data and the availability of joint use of data generation points is mutually beneficial.
